ARENSE KHUMALO

PROFESSIONAL SUMMARY

I am a Qualified Electrician who hold a National diploma in Electrical Engineering from Vaal University of Technology and a Section 26(D) Electrical trade test. I have experience in residential, commercial, and industrial electrical systems. Expertise in fault finding, installations, maintenance, and compliance with SANS electrical standards. Proficient in Schematic interpretation, cable termination, transformer testing (up to 11KVA), and switchgear maintenance. Skilled in electrical diagnostics, safety protocols, and team collaboration. Committed to delivering high-quality, efficient, and safe electrical solutions.

PERSONAL DETAILS

Contact	:	064 909 7020
E-mail address	:	arensekhumalo63@gmail.com
Location	:	Vanderbijlpark, Gauteng 1911
Nationality	:	South African
EE	:	Black Male
Licence	:	Code 10-C1

CORE COMPETANCIES

- In-depth understanding of electrical systems, wiring, and circuitry to effectively install, maintain, and repair electrical equipment.
- Proficiency in using maintenance management software, Microsoft Office Suite, and other relevant technologies.
- Ability to perform root cause analysis and implement corrective actions to improve system reliability.
- Skilled in reading and interpreting electrical blueprints, wiring diagrams, and technical manuals.
- Competent in fault finding, diagnosing electrical failures, and implementing timely repairs to maintain safety and efficiency.
- Knowledgeable in operating and maintaining industrial machinery, motors, transformers, switchgear, and control panels.
- Proven experience in performing preventive, predictive, and corrective maintenance on electrical and mechanical equipment.
- Good manual dexterity and physical stamina to handle electrical installations and repairs in various environments.
- Able to work independently and as part of a team while maintaining effective communication with supervisors and other tradespeople.

EXPERIENCE

Technician | Ceramic technologies **[July 2022– Current]**

Duties Include:

- Performing routine inspection and preventative maintenance of substation components.
- Commissioning new and old equipment to ensure functionality and safety.
- Testing cables after joining and termination to ensure fault-free operation.
- Upgrading existing electrical machinery and systems to meet current standards and technological advancements.
- Conducting daily tests on electrical systems and machinery using specific equipment.
- Installing new equipment and interpreting electrical drawings.
- Rectify any defective equipment or tooling.

- Develop maintenance plans and check lists on assigned equipment.
- Ensure general maintenance on equipment.
- Ensure that machinery and equipment is maintained and conduct minor maintenance and repairs.
- Ensuring compliance with Health and Safety requirements.

Electrical Assistant | Revive Electrical Transformers [February 2020– June 2022]

Duties Include:

- Handled electrical distribution, reticulation, and protection of electrical equipment.
- Applied electrical machinery for various applications and performed maintenance.
- Designed power systems according to client specifications and local standards.
- Oversaw manufacturing and testing of power equipment and wiring of control panels.
- Conducted maintenance on plant and machinery.
- Applied Occupational Health and Safety Act principles in the work environment.
- Supported site team during construction and site acceptance testing of substations
- Performed routine tests on single-phase and three-phase oil-immersed distribution transformers (16KVA to 5MVA), including insulation resistance, ratio-turns, applied voltage, induced voltage, load, no-load, and partial discharge tests.
- Assisted with commissioning and handover processes.
- Designed and modified electrical circuits and installed AC drives, DC drives, and soft starters.
- Prepared monthly reports on tenders submitted, orders received, and other reports requested by management.
- Installed generators and worked with VFD and PLC control panels and machinery.

Electrical Engineering Trainee | Revive Electrical Transformers [February 2019– February 2020]

Duties Include:

- Handled electrical distribution, reticulation, and protection of electrical equipment.
- Performed electrical wiring and testing on low voltage mini sub-station panels
- Applied electrical machinery for various applications and conducted maintenance.
- Wired low voltage distribution panels.
- Performed routine tests on single-phase and three-phase oil-immersed distribution transformers ranging from 16KVA to 5MVA, including: Insulation resistance test, ratio-turns test, applied voltage test, Induced voltage test, load test, no-load test, and partial discharge test.

EDUCATION

Institution	:	Vaal University of Technology
Qualification	:	National Diploma in Electrical Engineering
Status	:	Completed
Institution	:	Rixaladza institute of competency
Qualification	:	Electrician (Section 26D) Trade Certificate
Status	:	Completed

ACQUIRED CERTIFICATIONS AND TRAININGS

- Operate on Medium Voltage Network -MTW Training Centre (awaiting certificate).
- MV Cable Joint and Termination Certificate– Joint Master.
